

## What's New

### Advanced loader scale with touch screen display

The VEI Helper 21 is an advanced loader scale for weighing and managing production data. Its unique touch screen display gives the operator easier access to his list of customers, products, truck identification, transporters, and more.

Features include: the Helper 21 cellular

modem that allows data to be transferred directly to your office; the blending mode which allows the batching of different products under one recipe name; and a security system incorporated in the Helper 21 that manages operator access and blocks the ignition to allow only permitted operators to use the machine. Data can be printed on VEI's thermal printer and loading data can be transferred to a PC via the two USB-key supplied with every Helper 21.

The Helper 21 offers ultimate accuracy of  $0\pm 1$  percent while weighing in motion and uses the revolutionary VEI dynamic accuracy stability control. The Helper 21 is not only a weighing system but a complete Payload Management solution.
