

## Vei Group releases HELPER 21

Helper 21, from Vei Group Srl, Italy, is the first on board weighing system which integrates the PALM concept with a unique VEI operating System allowing a powerful solution and simplicity of use. Visitors to Hillhead 2007 can see the system on Stand No P78.

### **Much more than a weighing system**

The HELPER 21 is not only a loader scale but a complete Payload Management combined with a modern and user friendly interface which makes it the state of the art within the industry and the most advanced technology out there. Manufactured with the last electronics componentry available today, the HELPER 21 manages for you the workflow and it is able to connect wireless with a remote location doesn't matter how far it is. Nowadays the loadings done on site must be linked to other vital management data which are part of the business logistic; they must be analysed and optimised in terms of reducing costs and increasing profits per transported tonne.

**International Cement review** (United Kingdom)

June 2007
